KZValve Radiant Zone Control

Control radiant heating zones with valves that can be trusted for dependability. KZValve offers motorized electric ball and butterfly valves from one-fourth inch to 6". Using solid state circuit boards, KZValve actuators provide maximum dependability to radiant systems, flow control systems and home flood control systems. All KZValve actuators are NEMA 6P (waterproof), NEMA 7D (ignition safe), and exceed the USCG electrical systems standards. Valves are available in stainless steel, bronze, poly, or nylon. The actuator is easily removed from the valve, and the valve can stay in service if the actuator is removed. Put your specs into the On-line Valve Configurator at ww.kzvalve.com or call KZValve, 800-288-1112.
