KZValve Brings Automated Valves to the Marine Market

KZValve automated valves relieve space constraints for design engineers, give boat owners greater convenience and improve security at port.

KZ valves will automate almost any marine valve. Apply to potable water and waste water systems. Use as engine cooling water valves and as automated fuel tank selector and diverter valves. KZ automated valves can be used in conjunction with manual seacocks or completely supplant them. Retrofit kits are available to automate seacock applications.

Electric actuator housings are rated NEMA 6P (waterproof) and NEMA 7D (ignition safe) and exceed the USCG Electrical Systems Standard. Now, here's the fun part and the reason you will contact KZValves: these valves can be programmed to control upon operator command, engine start up, intelligent system directives, or via manual operation. KZValve gives you the ability to design an automated system for operating multiple automatic valves that perform synchronous tasks in a precise, verifiable mode of action.

Select KZValves for your marine applications, call 800-288-1112 or go to kzvalve.com/marine
